EXPERIENCE

Senior Software Development Engineer, Amazon — March 2021 – Present

- Designed and implemented a unified micro-frontend architecture that consolidates 80+ scattered internal warehouse-management tools into a single platform, giving operators one place to run a site at a glance.
- Built a large-scale learning management system for Amazon associates in a fast-paced agile environment, working directly with stakeholders to shape the application around their training and development needs.
- Designed an end-to-end data reporting solution for business intelligence on Spark, ElasticSearch, Glue, and Kinesis, turning raw operational events into decision-ready insight.
- Delivered resilient, scalable services across Lambda, DynamoDB, S3, SNS, and Step Functions.
- Worked across TypeScript (Node.js), Java, and Python, using Angular to build feature-rich, responsive web front ends.

Machine Learning Engineer, RBC, Toronto — May 2019 – August 2019

- Developed analytics in Python, SQL, and JavaScript alongside the machine learning team, and optimized feature bucketing distribution algorithms over Big Data managed on a Hadoop cluster.
- Analyzed XGBoost and Random Forest performance using ROC curves, non-cumulative lifts, and confusion matrices.
- Implemented the LIME explainer for black-box model testing and automated the client look-up dashboards built around it.

Teaching Assistant, University of Toronto — September 2016 – December 2017

- Tutored first-year mathematics and computer science, guiding students through the transition from high school to university coursework.

PERSONAL PROJECTS

Halvy — React Native (Expo), TypeScript, AWS CDK, DynamoDB, Lambda

Cross-platform shared-expense app for couples and households. Built an integer-cent split engine covering equal, exact, percentage, share, and proportional-by-income splits with exact settlement, on an offline-first SQLite client backed by a serverless API. Live on the App Store and at usehalvy.com.

Seatt — React Native, Hono, TypeScript, DynamoDB, Rekognition, RevenueCat

Dating app built around concrete, time-boxed plans instead of profiles. Designed a single-table data model and an event-driven backend that handles seat expiry, grace windows, and automated photo moderation. Live on the App Store and at seatt.app.

MedSentri — React, TypeScript, OpenSearch, API Gateway, Cognito, Claude

Medical-information platform that normalizes FDA, Health Canada, ClinicalTrials.gov, WHO, CDC, and RxNorm data into one searchable surface across roughly fifty Lambda handlers, with plain-language AI summaries. Live at medsentri.com.

DareUp — React Native (Expo), TypeScript, AWS CDK, Lambda, Vite

Short-form video app for completing and sharing dares, shipped as a mobile client, admin dashboard, and marketing site from one repository, with every AWS resource defined in CDK. Live at dareup.app.

EDUCATION

University of Toronto Scarborough — September 2016 – April 2020

Honours Bachelor of Science, Mathematical and Computer Sciences

SKILLS

Languages	TypeScript, Java, Python, JavaScript, C#, SQL, C++
Cloud	AWS CDK, Lambda, DynamoDB, S3, CloudFront, Step Functions, API Gateway, Cognito, SNS
Data	Spark, Kafka, Kinesis, Glue, ElasticSearch, OpenSearch, MongoDB, MySQL
Client	React, React Native, Expo, Angular, Node.js, Three.js, Vite
